

Super Seaker ROV

The Super Seaker comes in two 10ft by 8ft containers with a separate 300m umbilical winch.

One container houses all the surface electronics and controls whilst the other acts as the work shop and storage container. Separate 240V and 400V supplies are required to supply the control unit and winch.

Other features

- 100m hand held umbilical.
- 300m Winch controlled umbilical
- Capable of working to 250m.
- DVD and HD recording.
- 100mm cutting arm.

This is a small, versatile and very capable ROV suited to a wide range of tasks. Contained within two robust containers it is capable of being dispatched at short notice and is subject to very short set up times. The electronics package is second to none in this size of vehicle and offers a product not seen in the inshore market. The Manipulator arm offers real work capabilities alongside the cutting tool.
